

Mohamed Saied Abdo

Software Engineer | Mobile · Backend · Machine Learning

Alexandria, Egypt • mohameedsaied47@gmail.com • +20 100 483 2172 • linkedin.com/in/mohameed-saied • github.com/mohamedsaied552

ABOUT ME

Versatile Software Engineering student (graduating July 2026) with proven, hands-on experience across three engineering tracks: cross-platform mobile development (Flutter/Firebase), backend web development (ASP.NET Core/C#), and machine learning (TensorFlow/Python). Delivered 4+ complete projects from concept to working product — including a live scooter rental app with payment integration, a plant disease classifier deployed as a web app, and a real-time chat system. Self-driven, fast learner, and ready to contribute immediately.

TECHNICAL SKILLS

Mobile Development: Flutter, Dart, cross-platform Android & web, responsive UI design

State Management: Cubit, BLoC, Provider — reactive UI patterns and clean architecture

Backend Development: ASP.NET Core, C#, RESTful API design, MVC/Repository patterns

Machine Learning: Python, TensorFlow, computer vision, model training & deployment

Cloud & Firebase: Firebase Auth, Cloud Firestore, Firebase Storage, Push Notifications

Databases: SQL Server, Cloud Firestore, relational schema design, ORM mapping

APIs & Networking: REST API integration, HTTP (Dio/http), JSON parsing, TCP/IP

Developer Tools: Git, GitHub, VS Code, Android Studio, Postman, Streamlit, Vercel

CS Fundamentals: OOP, data structures & algorithms, software design patterns, problem solving

PROJECTS

Scooter Rental App — Graduation Project

Flutter · Dart · Firebase · REST APIs · Paymob Payment Gateway · Cubit

- Developed a full cross-platform scooter rental application for Android and web, covering user registration, live vehicle tracking, and cashless payments end to end.
- Integrated Paymob payment gateway to process secure digital wallet top-ups, enabling a complete rental payment flow without manual cash handling.
- Connected Firebase Auth and Cloud Firestore for user management and live data sync, achieving sub-100 ms vehicle availability updates during testing.
- Implemented Cubit state management with clean architecture, reducing UI rebuild overhead and making each feature independently testable.
- Added client-side input validation before every API call, cutting failed network requests by approximately 25% and improving overall user experience.

Crop Health Monitor — Machine Learning & Web Application

Python · TensorFlow · Computer Vision · Streamlit · GitHub

- Built an end-to-end machine learning pipeline to classify plant diseases and monitor crop health using a custom computer vision model trained with TensorFlow.
- Engineered data preprocessing routines and tuned model architecture to improve classification accuracy, then deployed the trained model as an interactive web application using Streamlit.
- Configured GitHub version control and prediction logging to track model performance across live test runs, ensuring reliable output monitoring post-deployment.

Web Application Development — ASP.NET Core Backend

ASP.NET Core · C# · SQL Server · RESTful APIs · Entity Framework

- Built backend systems and RESTful APIs using ASP.NET Core and C#, applying Repository and MVC design patterns to separate concerns and support maintainable code.
- Designed relational database schemas in SQL Server with Entity Framework ORM mapping, covering multi-table relationships, indexing, and referential integrity.
- Implemented secure user authentication and authorization flows, handling token-based access control for protected API endpoints.

Real-Time Chat Application

Flutter · Firebase Firestore · Firebase Auth · Real-Time Sync

- Built a real-time messaging app where messages appear instantly across all connected devices using Firestore live listeners — no manual refresh required.
- Implemented Firebase Authentication to manage secure sign-up and login, restricting chat access to verified users only.
- Designed a clean chat UI with message bubbles, timestamps, and auto-scroll behavior, matching familiar messaging app conventions.

EDUCATION

Barj El Arab University of Technology

Sep. 2022 – Jul. 2026

Bachelor of Engineering (B.Eng.) — Software Engineering

Alexandria, Egypt

- Relevant coursework: Data Structures & Algorithms, Database Systems, Computer Networks, Software Engineering, Operating Systems, Real-Time Systems, OOP, Cloud Computing.

CERTIFICATIONS

Flutter & Dart Advanced Architecture — Udemy

2026

Clean architecture, BLoC/Cubit state management, advanced Flutter patterns

IT Essentials & Networking — Cisco Networking Academy

2025

TCP/IP fundamentals, routing protocols, network topologies, subnetting

LANGUAGES

Arabic — Native **English** — Professional working proficiency
